## **Verionix Grows Presence in Japan, Pacific Northwest and New England**

*Partnerships with regional sales and support organizations to expand presence and speed service responsiveness*

**Wilmington, Mass. – February 28, 2008** – Verionix, a leader in process-compatible gas composition sensors, today announced that it has partnered with organizations in Japan, the Pacific Northwest and New England to both support its installed base of sensors and grow awareness of its products in these key regions. With these new partnerships, Verionix adds sales and technical support depth in the burgeoning markets of the Pacific Rim, and in regions where key End-users and OEM equipment makers are located.

In Japan, Verionix has partnered with Sanyo Trading Company's Scientific Instruments Business Group ([http://www.sanyo-si.com/index\\_en.html](http://www.sanyo-si.com/index_en.html)) to sell and support its gas composition sensor products. With technical expertise and experience in analytical instruments for the semiconductor, electronics and gas supply/distribution markets, Sanyo's Scientific Instruments Business Group is headquartered in Tokyo and has satellite offices in Osaka and Nagoya.

For New England's mix of OEM equipment suppliers, semiconductor makers and emerging solar, fuel cell and life sciences companies, Verionix has tapped Leviathan VPT ([www.LeviathanVPT.com](http://www.LeviathanVPT.com)) of Strafford, New Hampshire to represent its product lines. With years of hands-on experience in industrial vacuum, Leviathan VPT brings to Verionix a wealth of knowledge about customers in the New England and New York State areas.

In the Pacific Northwest, home to many prominent semiconductor and silicon wafer fabrication companies, Verionix has selected SMC Technologies (North America) to represent Verionix products in the states of Oregon, Idaho, Washington, Utah and Montana. SMC Technologies brings broad customer knowledge to Verionix gained from years of experience in the sale and support of capital equipment and components to the semiconductor industry.

On the formation of these new business relationships, Chris Doughty of Verionix commented "We're pleased to partner with such talented and well-respected organizations. Together, we look forward to enhancing our now shared relationships with existing customers and growing the number of Verionix sensor implementations, worldwide."
